NOTES ON SUBJECT INDEX

This is our first index to be produced by computerized methods. It contains some blemishes and there have been problems in achieving consistency, which we hope to overcome in future indexes. In particular, there is faulty aggregation of entries which has resulted in some subject index headings being printed several times instead of just once. For examples see "abnormalities" and "antibiotics". Where this defect occurs, the reader must be prepared to look at the headings immediately above and below the one selected, in order to avoid missing entries.

An advantage of computerized production is that the index is much more detailed than the index produced by manual methods, and we hope this will assist the retrieval of information. The subject headings in use are strictly controlled, and a full list, together with cross-references and synonyms, is available as "Veterinary subject headings" (published by Commonwealth Agricultural Bureaux in 1972). Because the cross-references are available in this publication, they have not been printed in the index.

Magnetic Tape Services

A trial service containing almost 20,000 items from the current volumes of Index Veterinarius and Veterinary Bulletin can be provided to enable existing tape users to become familiar with the services to be provided by the Commonwealth Agricultural Bureaux. Each item will consist of bibliographic details and several levels of indexing terms. Both 7 and 9 track versions are available and enquiries specifying tape density required, should be sent to:-
